

Ref: <https://docs.microsoft.com/en-us/microsoftteams/troubleshoot/teams-devices-and-rooms/rooms-known-issues>

- A consumer TV that's used as the front-of-room display might cause stability issues in Microsoft Teams Rooms for the following reasons:
 - Inconsistent implementation of standby modes
 - Active video source selection
 - Incorrect EDID information that's communicated to the Microsoft Teams Rooms device

Known symptoms include a black or gray screen on the front-of-room display, or the Microsoft Teams Rooms console becomes unresponsive after waking from standby mode. If you experience issues when you use consumer TVs, we recommend that you install a configurable EDID controller or EDID emulator, such as the Kramer PT-1C.
